PROFESSIONAL SUMMARY

Senior Android engineer with 6+ years building and scaling apps across AI, social, e-learning, and media products, from 0-to-1 launches to a 5M+ install app. Led Android teams of 2–4, ran hiring interviews, and mentored developers through onboarding and growth. Owns a 30+ module Android codebase and took its Web version to production, first with Compose Multiplatform (Kotlin/Wasm), then on React. Works as product owner alongside product, design, and backend.

SKILLS

Languages: Kotlin, Java, TypeScript, SQL
Android: Android SDK, Jetpack Compose, Material 3, Views (XML), Coroutines/Flow, RxJava, Navigation 3, Paging 3, Room, DataStore, WorkManager, CameraX, Glance widgets, FCM, Credential Manager
Kotlin Multiplatform: KMP (Android, iOS, Web/wasmJs), Compose Multiplatform, expect/actual, Ktor, Koin, kotlinx.serialization
Architecture: Clean Architecture, MVVM, MVI, multi-module (api/impl), Gradle convention plugins, Hilt, Dagger
Media & On-device ML: ExoPlayer / Media3 (incl. Transformer), FFmpeg, Coil, Glide, Lottie, ML Kit, LiteRT
Performance: Baseline Profiles, Macrobenchmark, Perfetto, Android Vitals, LeakCanary, R8
Google Play: Play Billing, RevenueCat, In-App Review, In-App Updates, Play Integrity, Play Console, Play Developer API
Backend & Data: Retrofit, OkHttp, REST APIs, WebSockets, Node.js, Firebase (Cloud Functions, Crashlytics, Remote Config, A/B Testing, Firestore, Auth), Google Gemini API, Amplitude, AppsFlyer, Adjust
Testing & Delivery: JUnit, MockK, Robolectric, Espresso, UIAutomator, Roborazzi, Paparazzi, Playwright, Detekt, Gradle (Kotlin DSL), GitHub Actions, GitLab CI, Sentry
Web: React, TypeScript, Vite, Tailwind CSS, Cloudflare Workers
AI Tooling: Claude Code (custom subagents, skills, hooks), MCP servers, Cursor

PROFESSIONAL EXPERIENCE

Senior Android Developer — Swapify *01/2026 – Present*

App: play.google.com/store/apps/details?id=com.swapface.androidapp | Web: https://web.swapify.link/

- Returned to Swapify to own the Android app of its AI face-swap video product (30+ modules): architecture, API contracts, releases, and production stability.
- Proposed and shipped the production Web version from the existing Android codebase with Compose Multiplatform on Kotlin/Wasm, sharing commonMain code.
- Reached Day-1 retention of ~27% on Web, the product's best-retaining platform and up to 2x Android.
- Added web purchases through RevenueCat web billing; with the Web version, overall user LTV rose by ~20%.
- Migrated the Web app from Compose Multiplatform to React and TypeScript in 3 weeks (~55 screens) with Claude Code agents, gating each screen on a screenshot-parity check.
- Set up continuous deployment on Cloudflare Workers Builds with automated test runs and Sentry monitoring, driven by a Claude Code automation pipeline.
- Launched server-side AI moderation on Firebase Cloud Functions: rule checks plus parallel Gemini text and photo checks, live since 10/2026 with 0 false refusals across 1,145 catalog templates.

Senior Android Developer — Instories *05/2025 – 01/2026*

App: play.google.com/store/apps/details?id=io.instories

- Developed features for a short-form video editor with 5M+ installs in a team of 3 Android developers.
- Found and fixed bottlenecks in media-heavy editor features, part of the work that lifted the Play Store rating from 4.2 to 4.6.
- Wrote shared business logic in the Kotlin Multiplatform codebase for 3 platforms (Android, iOS, Web).
- Delivered crash and ANR fixes in team-wide stability work that took the crash rate from 0.5% to 0.3% and ANR from 0.9% to 0.4%.

Senior Android Developer — Swapify *04/2024 – 04/2025*

- Built the Android app for an AI face-swap video product from scratch; it grew from 0 to 30K MAU.
- Cut crashes from ~2% to ~0.2% and ANR from ~1.6% to ~0.15% by re-architecting video playback around a single ExoPlayer instance shared across screens, with codec fallback on errors.
- Designed a device performance-class system that sets concurrent players, video quality, preload window, and animations per device tier.
- Preloaded onboarding and paywall videos, reducing paywall dismissals in the first 4 seconds by ~40%.
- Implemented a Room caching layer that lowered server load by 70%.
- Raised first-generation conversion by 20% with a home-screen "Create your first generation" entry point; as product owner, ran A/B tests that grew purchase conversion 15% and engagement 22%.

Android Developer / Android Team Lead — Paysenger *04/2022 – 04/2024*

App: play.google.com/store/apps/details?id=com.paysenger.androidapp

- Led an Android team of 2: ran hiring interviews, onboarded and mentored developers, supported their growth, reviewed code, and set architecture (Clean Architecture, MVVM, Hilt/Dagger).
- Created the Android app for a creator social network from scratch: feed, catalog, chats, referral program, and premium features. 100K+ downloads, 4.8 Play Store rating.
- Cut dropped frames in the content feed from ~40/sec to ~10/sec (75%) by minimizing recompositions.

Earlier Experience — SoftJet · IPartner / Binet *09/2020 – 04/2022*

- Developed an e-learning app with 1,000+ courses, mentored 2 Android developers, and specified backend APIs including real-time chat (SoftJet, 07/2021 – 04/2022).
- Delivered a business-intelligence app, maintained 3 Java apps, and doubled map-rendering performance with Maps.me/Mapbox (IPartner / Binet, 09/2020 – 04/2021).

PROJECTS

Gisti — AI Checklists — Side Project · Kotlin Multiplatform *01/2026 – Present*

App: play.google.com/store/apps/details?id=com.antonchuraev.aichecklists | Web: https://gisti-ai.com/

- Shipped a production AI app to Google Play and Web from one KMP codebase: Compose Multiplatform on wasmJs, Room over SQLite OPFS in a Web Worker.
- Kept Gemini inference server-side in Firebase Cloud Functions (API keys in Secret Manager, none on the client) for AI chat and for turning photos, PDFs, text, links, and voice notes into checklists.
- Implemented freemium on RevenueCat (paywall, trial, daily credits) with limits set through Remote Config; CI deploys the web build to Cloudflare Workers, with Playwright e2e tests.

AI Teacher — Tutor & Courses — Side Project · Android + AI *10/2026 – Present*

App: play.google.com/store/apps/details?id=com.antonchuraev.aiteacher

- Took an Android AI tutor from first commit to Google Play in 10 days: each course is a guided chat, and users build courses from their own PDFs, photos, text, and links.
- Ran tutoring on Gemini (Vertex AI) inside 11 TypeScript Cloud Functions; a hint ladder and an answer-leak check in code keep the model from giving the answer away.
- Covered the app with 1,100+ Android tests (Robolectric, Roborazzi screenshots) and 500+ backend tests (Vitest); subscriptions run on RevenueCat with a server-side webhook.

layout-debug-mcp — Open Source · MCP Server *09/2026 – Present*

Repo: github.com/AntonChuraev99/Layout-debug-mcp

- Built an MCP server: pick a layer in a running UI (web or Jetpack Compose over adb), drag it on the real screen, and hand the change to an AI agent with measurements and source file:line.
- Released on npm with 500+ downloads and an on-device Android agent library on Maven Central; works with Claude Code, Codex, Cursor, and VS Code Copilot.

Claude Code Multi-Agent System — Open-Source Developer Tooling *08/2025 – Present*

Repo: github.com/AntonChuraev99/claude

- Designed a multi-agent setup on Claude Code: domain subagents for Android, KMP, Compose UI, and React, 20+ custom skills, and 20+ hooks. Used daily for production work on Swapify and Gisti.
- Integrated 6 MCP servers (Amplitude, Firebase, Sentry, RevenueCat, GitLab/Cloudflare CI, browser automation) and logged 240+ workflow improvement experiments.

EDUCATION

Bachelor's Degree in Business Informatics — Synergy University, 2021 – 2025

Focus on IT management, business processes, and digital systems.

LANGUAGES

English — Upper-Intermediate (B2) | Russian — Native
