Skills

Kotlin

Java

Clean Architecture (MVVM / MVI)

ExoPlayer

FFmpeg

DI (Dagger / Hilt / Koin)

Jetpack Compose

Material Design 3

Room Database

Gradle

GitHub Actions

Unit Testing (JUnit, Mockito, MockK)

UI Testing (Espresso, UIAutomato)

Profile

Senior Product-Oriented Android Developer with 6+ years of experience building and scaling mobile products across B2C, B2B, Social, AI, and Lifestyle domains. Led Android development for startups and mature products with full ownership from architecture to release and post-launch optimization. Launched and scaled multiple Android applications, including Swapify, growing the product from 0 to 25,000 users, improving retention and engagement, and achieving strong stability metrics (crash rate 0.22%, ANR 0.44%). Strong focus on performance, Google Play metrics, and app quality. Expert in Kotlin, Jetpack Compose, Coroutines/Flow, and modern Android architectures (Clean Architecture, MVVM, MVI). Experienced in mentoring developers, leading Android teams, and collaborating closely with product and design to deliver user-driven features.

Education

Bachelor's Degree in Business Informatics

Sep 2021 - 2025

Synergy, Synergy

Focus on IT management, business processes, and digital systems.

Employment

Instories

May 2025 - Dec 2025

Senior Android Developer

- Developed and maintained a **high-load mobile video editor** for creating **short-form media content for social networks** (reels, posts, stories), focusing on performance, stability, and scalability of core user flows.
- Improved application stability by **reducing Crash Rate and ANR Rate to recommended Google Play thresholds**, significantly increasing crash-free and ANR-free sessions.
- Increased the **average app rating** by improving overall performance, reliability, and user experience across key editor scenarios.
- Worked with **Kotlin Multiplatform (KMP)**, delivering shared business logic and features for **Android, iOS, and Web**, ensuring consistent behavior across platforms.
- Built an **Android application from scratch** using internal KMP libraries, integrating shared core modules with an Android-specific UI layer.
- Identified and resolved **performance issues** in a high-load editor, improving responsiveness of media-heavy features.
- Collaborated with product managers and cross-platform teams on feature design, technical decisions, code reviews, and release quality.

Senior Android Developer

Apr 2024 - May 2025

Swapify

- Developed the Swapify mobile application from scratch – an AI-powered face-swapping video app, designing the architecture and implementing core functionality.
- Worked extensively with APIs and video processing, integrating AI algorithms and optimizing video rendering performance. Implemented a caching system (Room), storing user data, video feeds, settings, and uploaded files, reducing server load by 70% and improving content loading speed.

Performance Testing (Android Profiler)

Screenshot Testing (Papazzi)

Firebase (Crashlytics, Functions, Firestore, Storage, Authentication, A/B Testing, Performance, Remote Config and other)

Amplitude

AppsFlyer

Google Analytics

Retrofit / Ktor + WebSockets

WorkManager

DataStore

SharedPreferences

Languages

Hobbies

■ Traveling

■ Reading

- Acted as a Product Manager, defining product strategy, developing and documenting features, managing sprints, and overseeing task execution.
- Conducted A/B testing, analyzing the impact of new features on purchase conversion, click-through rates, user engagement, and time spent on the app. Achieved a 15% increase in conversion rate and boosted user engagement by 22% through data-driven feature optimization.
- Enhanced user experience, making continuous improvements based on analytics and user feedback.

Middle-Senior Android Developer
[Paysenger.com](#)

Apr 2022 - Apr 2024

- Developed the Paysenger mobile application from scratch – a social network for creators, designing the architecture and implementing key features (content feed, catalog, request creation, chats, profile, referral program, account top-up, premium features).
- Led the Android development team, managing processes, task distribution, and code reviews.
- Designed the application architecture using Clean Architecture, MVVM, and DI (Hilt/Dagger), ensuring scalability and maintainability.
- Optimized the content feed, minimizing recompositions to enhance performance and reduce system load.
- Worked with ExoPlayer, improving video playback efficiency and optimizing memory usage.
- Implemented Room for data storage, caching most of the application's data, significantly reducing network load and speeding up content loading.
- Utilized Jetpack Compose, WorkManager, Firebase, implementing efficient data updates and background synchronization.
- Continuously improved the product, focusing on optimization, stability, and user experience.
- Achieved significant improvements in all key metrics, including performance, stability, and application speed.

Middle Android Developer
[SoftJet, Moscow](#)

Jul 2021 - Apr 2022

- Developed a mobile application for online learning, implementing features for course completion tracking, progress monitoring, and lesson streaming.
- Led a team of 2 Android developers, managing workflows, distributing tasks, and conducting code reviews.
- Designed and specified API requests for backend developers, including chat functionality.
- Held daily calls with the client, reviewing past-day results and planning future development steps.
- Trained Android developers, conducting technical breakdowns, explaining library concepts, and verifying completed tasks.
- Followed the Waterfall methodology, ensuring structured project planning and clear team communication.

Android Developer
[IPartner | Binet, Moscow](#)

Sep 2020 - Apr 2021

- Developed an application for tracking information about individual entrepreneurs (IE) and LLCs, including financial metrics and real estate data.
- Maintained and improved three Java-based business applications, ensuring their stability and performance.

- Worked with maps (Maps.me, Mapbox) to optimize routing, customize UI, and handle geospatial data.
- Implemented caching mechanisms for maps, reducing server load and improving data retrieval speed.
- Refactored the codebase, enhancing its readability, maintainability, and scalability.
- Optimized map rendering performance, resulting in a smoother user experience and faster route calculations.
