PROFESSIONAL SUMMARY

Senior Android engineer with 6+ years building consumer apps in Kotlin and Jetpack Compose, from a 5M+ install video editor (Instories) to an AI video app (Swapify). Owns features from hypothesis to measured result: proposes the idea and its target metric, ships it, A/B-tests it, and tracks the effect. At Swapify: lifted first-generation conversion ~20% by reworking onboarding around a first AI generation; grew user LTV ~20% since launch with a web version built from the Android codebase; reduced crashes tenfold, to ~0.2%, with a shared-ExoPlayer playback architecture.

SKILLS

Languages: Kotlin, Java, TypeScript, Python, SQL
Android UI: Jetpack Compose, Compose design systems, Material 3 (incl. Adaptive), Views (XML), Custom Views, RecyclerView, animations, accessibility, Coil, Glide, Lottie
Android Platform: Android SDK, Android Jetpack (ViewModel, LiveData, Lifecycle), Coroutines/Flow, RxJava, Navigation 3 / Navigation Component, WorkManager, CameraX, Glance widgets, Credential Manager, FCM, deep links / App Links, Google Maps SDK, Mapbox
Data & Networking: Room, SQLite, DataStore, Paging 3, Retrofit, OkHttp, Ktor, REST, WebSockets, kotlinx.serialization
Kotlin Multiplatform: KMP (Android, iOS, Web/wasmJs), Compose Multiplatform, Koin, expect/actual
Architecture: Clean Architecture, MVVM, MVI, multi-module (api/impl), Gradle convention plugins, Hilt/Dagger
Media & On-device ML: ExoPlayer / Media3 (incl. Transformer), FFmpeg, ML Kit, LiteRT
Performance: Baseline Profiles, Macrobenchmark, Perfetto, Android Profiler, LeakCanary, Firebase Performance, Android Vitals, R8
Google Play: Play Billing, RevenueCat, Play Integrity, In-App Review, In-App Updates, Play Developer API
Product & Analytics: Firebase A/B Testing, Remote Config, Amplitude, AppsFlyer, Adjust, Firebase Analytics, Crashlytics
Testing: JUnit, MockK, Mockito, Truth, Turbine, Robolectric, Espresso, Compose UI testing, UIAutomator, Roborazzi
CI/CD: Gradle (Kotlin DSL), GitHub Actions, GitLab CI, Detekt, Sentry
Tools & Process: Android Studio, Git, Jira, Confluence, Notion, Figma, Agile (Scrum, Kanban), code review, technical interviews, mentoring
Web & Backend: React, Node.js, Firebase (Cloud Functions, Firestore, Auth), Gemini API / Vertex AI, Cloudflare Workers
AI Tooling: Claude Code (subagents, skills, hooks), MCP servers, Cursor

PROFESSIONAL EXPERIENCE

Senior Android Developer — Swapify *01/2026 – Present*

App: play.google.com/store/apps/details?id=com.swapface.androidapp | Web: https://web.swapify.link/

- Rejoined and took ownership of the AI face-swap video app's Android codebase (30+ modules): architecture, API contracts, releases, and stability.
- Proposed and shipped a KMP web version of the Android app (~27% D1 retention, up to 2x Android's; LTV up ~20%), then moved it to React and Stripe by directing Claude Code agents with parity checks.
- Rolled out a full-app redesign on a refreshed Compose design system, with new Templates and Feed screens where ~40% of AI generations now start.
- Launched daily rewards (credit streaks, idempotent server-side claims, push reminders), adding ~1 pp to D1–D7 retention per day and ~0.7 pp to purchase conversion.
- Proposed and A/B-tested a redesigned paywall (purchase conversion up ~2 pp) and a push-permission prompt after the user's first key action (opt-in up ~10 pp).

Senior Android Developer — Instories *05/2025 – 01/2026*

App: play.google.com/store/apps/details?id=io.instories

- Developed editor features and shared Kotlin Multiplatform business logic (Android, iOS, web) for a short-form video app with 5M+ installs, as one of 3 Android developers.
- Fixed bottlenecks, crashes, and ANRs in media-heavy editor features as part of team-wide stability work: crash rate 0.5% to 0.3%, ANR rate 0.9% to 0.4%.
- Improved the in-app CSAT survey, which raised the Play Store rating from 4.2 to 4.6.

Senior Android Developer — Swapify *04/2024 – 04/2025*

- Built the Android app from scratch; it grew from 0 to 30K MAU.
- Cut the crash rate from ~2% to ~0.2% and ANR from ~1.6% to ~0.15% by rebuilding video playback around one ExoPlayer instance shared across screens, with codec fallback.

- Reworked onboarding so new users reach their first AI generation, lifting first-generation conversion ~20% and purchase conversion ~1 pp.
- Preloaded onboarding and paywall videos, reducing paywall dismissals in the first 4 seconds by ~40%.
- Acted as product owner: wrote feature specs, planned sprints, and ran onboarding and paywall A/B tests that raised purchase conversion by ~10 pp and engagement by 22%.
- Designed device performance tiers that set concurrent players, video quality, preload window, and animations.

Android Developer — Paysenger ***04/2022 – 04/2024***

App: play.google.com/store/apps/details?id=com.paysenger.androidapp

- Led an Android team of 2, running hiring interviews, mentoring developers, reviewing code, and setting the architecture (Clean Architecture, MVVM, Hilt/Dagger).
- Designed and led the migration of the entire app from XML Views to Jetpack Compose, 30+ screens across sign-up, onboarding, feed, requests, profile, and settings.
- Created the Android app for a creator social network from scratch (feed, catalog, real-time chat over WebSockets, referrals, premium features): 100K+ downloads, 4.8 Play Store rating.
- Engineered the feed with paginated loading and a Room cache that shows content instantly; fewer recompositions cut dropped frames from ~40/sec to ~10/sec.

Android Developer — SoftJet ***07/2021 – 04/2022***

- Developed an e-learning app with 1,000+ courses, mentored 2 Android developers, and specified backend APIs, including real-time chat.

Android Developer — IPartner / Binet ***09/2020 – 04/2021***

- Implemented custom route rendering on Maps.me and Mapbox maps, doubling map-rendering performance; delivered a business-intelligence app and maintained 3 Java apps.

PROJECTS

AI Teacher — Tutor & Courses — Side Project · Android + AI ***10/2026 – Present***

App: play.google.com/store/apps/details?id=com.antonchuraev.aiteacher

- Delivered an Android AI tutor on Google Play (Firebase, Google Cloud) with non-sycophantic Gemini prompts refined over 6 versions, a hint ladder, an answer-leak check, and 300+ tests.

Gisti — AI Checklists — Side Project · Kotlin Multiplatform ***01/2026 – Present***

App: play.google.com/store/apps/details?id=com.antonchuraev.aichecklists | Web: https://gisti-ai.com/

- Launched a production AI app on Google Play and the web from one KMP codebase (1,500+ installs, 500+ MAU), plus a remote MCP server (Cloudflare Workers, OAuth) to edit checklists from Claude.

layout-debug-mcp — Open Source · MCP Server ***09/2026 – Present***

Repo: github.com/AntonChuraev99/Layout-debug-mcp

- Built an MCP server that lets developers drag a layer in a running UI (web or Compose over adb) and send the change to an AI agent with file:line; 500+ npm downloads, library on Maven Central.

Claude Code Multi-Agent System — Open-Source Developer Tooling ***08/2025 – Present***

Repo: github.com/AntonChuraev99/claude

- Created a Claude Code harness (subagents, 20+ skills, 20+ hooks, MCP links to Amplitude, Sentry, CI) whose review loop turns past comments into diff rules; ~1.5 pp more tasks pass QA the first time.

EDUCATION

Bachelor's Degree in Business Informatics — Synergy University, 2021 – 2025

Focus on IT management, business processes, and digital systems.

LANGUAGES

English — Upper-Intermediate (B2) | Russian — Native
