

Anton Churaev

Senior Android Developer | Kotlin Multiplatform & AI

Remote-first | Open to relocation worldwide

churaevanton@gmail.com | +7 977 615 15 14 | [linkedin.com/in/anton-churaev](https://www.linkedin.com/in/anton-churaev) | github.com/AntonChuraev99

PROFESSIONAL SUMMARY

Senior Android Developer with 5+ years building and scaling consumer apps from zero to production across B2C, AI, social, and lifestyle domains. Currently driving Android development at Swapify — scaled the app from 0 to 30K MAU and shipped its production Web version from the same codebase via Kotlin Multiplatform (Compose Multiplatform / Kotlin/Wasm), lifting overall user LTV ~20%. Expert in Kotlin, Jetpack Compose, and KMP across Android and Web. Ships full product cycles end-to-end in Agile teams and engineers a custom Claude Code multi-agent system to ship faster. Led Android teams of 2–4 and acted as product owner. Remote-first, open to relocation worldwide.

TECHNICAL SKILLS

Languages: Kotlin, Java, SQL

Android & UI: Android SDK, Jetpack Compose, Coroutines/Flow, WorkManager, Navigation 3, Material 3, Android View system

Kotlin Multiplatform: KMP (Android + Web/wasmJs), Compose Multiplatform, expect/actual, Skiko

Web & Design: JavaScript, React, Tailwind CSS, HTML / CSS, Figma

Architecture: Clean Architecture, MVVM, MVI, multi-module (api/impl), DI (Koin / Hilt / Dagger), SOLID, OOP, Agile/Scrum

Media & Video: ExoPlayer / Media3, FFmpeg, video processing, Coil, Glide

Data & Networking: Room (incl. SQLite OPFS on Web), Paging 3, DataStore, Retrofit, OkHttp, Ktor, REST APIs, WebSockets

AI & Backend: LLM integration (Google Gemini), Firebase (Cloud Functions, Crashlytics, Analytics, Remote Config, A/B Testing, Firestore, Auth), RevenueCat, Amplitude, AppsFlyer

Testing & CI/CD: Unit testing (JUnit, MockK), UI testing (Espresso, UIAutomator), screenshot tests (Paparazzi), web e2e (Playwright); Gradle (Kotlin DSL), Git, GitHub Actions, GitLab CI, Cloudflare Workers Builds, R8 / ProGuard, Sentry

Release & Store: Google Play Console (staged rollout & release tracks, Android Vitals monitoring, store-listing A/B testing), Play Store localization & ASO

AI Engineering: Claude Code (custom subagents & skills), MCP servers, multi-agent orchestration, agentic workflows, prompt engineering, Cursor

PROFESSIONAL EXPERIENCE

Senior Android Developer — Swapify 01/2026 – Present

Tech: Kotlin Multiplatform (Android + Web/wasmJs), Compose Multiplatform, JavaScript, React, Tailwind CSS, Cloudflare Workers Builds, Sentry, RevenueCat, Ktor, Koin

App: play.google.com/store/apps/details?id=com.swapface.androidapp

Web: <https://web.swapify.link/>

- Returned to Swapify to own the entire 30+ module Android app end-to-end (architecture, releases, RevenueCat web billing) and drive its Kotlin Multiplatform expansion to Web.
- Proposed and shipped Swapify's production Web version, reusing the Android codebase via Compose Multiplatform (Kotlin/Wasm) instead of a JS rewrite — lifting overall user LTV ~20% with the highest Day-1 retention of any platform (~27%, up to 2x mobile).
- Built a custom Claude Code automation system — auto-deploy, an automated-test pipeline (unit + UI tests), and Sentry performance monitoring — with continuous delivery of the Web version to Cloudflare Workers Builds.
- Built a semi-automated ASO pipeline for store-listing A/B tests (an LLM mines competitor SEO keywords, localizes copy/screenshots per country, and Claude renders design variants) — lifting install conversion ~30-40%, organic traffic ~40-50%, and Android revenue ~10-20% in optimized markets.
- Worked across the web stack — JavaScript, React, and Tailwind CSS — on Swapify's web-facing surfaces, complementing the Compose Multiplatform app.

Senior Android Developer — Instories 05/2025 – 01/2026

Tech: Kotlin, KMP, Jetpack Compose, ExoPlayer, FFmpeg, Firebase

App: play.google.com/store/apps/details?id=io.instories

- Shipped features for a high-load short-form video editor (5M+ installs) for reels, stories, and posts (Kotlin, Jetpack Compose, ExoPlayer, FFmpeg).
- Cut crash rate from 0.5% to 0.3% and ANR from 0.9% to 0.4%, raising crash-free and ANR-free sessions.
- Lifted Play Store rating from 4.2 to 4.6 by improving performance, stability, and UX in core editor flows.
- Delivered shared business logic to a Kotlin Multiplatform (KMP) codebase spanning Android, iOS, and Web; removed bottlenecks in media-heavy features.
- Wrote unit and UI tests (JUnit, Espresso) guarding media-heavy editor flows against regressions.

Senior Android Developer — Swapify 04/2024 – 04/2025

Tech: Kotlin, Jetpack Compose, Room, Coroutines/Flow, ExoPlayer, Firebase, Amplitude

App: play.google.com/store/apps/details?id=com.swapface.androidapp

- Built the entire Android app from scratch — an AI-powered face-swapping video product — scaling it from 0 to 30K MAU with organic growth from 10K to 30K (3x) via app quality and ASO.
- Proposed and shipped a home-screen "Create your first generation" CTA — replacing a dead-end post-signup landing with a guided path to the app's core action — that lifted first-generation conversion 20% and now drives 2% of all in-app purchases.
- Cut crashes ~2% to ~0.2% and ANR ~1.6% to ~0.15% by re-architecting video playback on media-heavy screens — a reusable shared ExoPlayer, a device performance-tier system (concurrent players, quality, preload), and codec fallback on errors; preloading critical onboarding/paywall videos cut early paywall abandonment (first 4s) ~40%.
- Reworked the in-app CSAT / feedback flow to detect dissatisfied users and route them to support for proactive resolution, lifting the Play Store rating from ~3.3 to ~4.5.
- Engineered an intelligent Room caching layer (~70% server load) and ran A/B tests that raised purchase conversion 15% and engagement 22%.
- Covered core generation and purchase flows with unit and UI tests, keeping releases stable as the app scaled to 30K MAU.

Middle-Senior Android Developer — Paysenger 04/2022 – 04/2024

Tech: Kotlin, Jetpack Compose, Room, Hilt/Dagger, WorkManager, Firebase

App: play.google.com/store/apps/details?id=com.paysenger.androidapp

- Built the Paysenger creator social network from scratch — feed, catalog, chats, referral program, and premium features (100K+ downloads).
- Led an Android team of 2 (task distribution, code reviews, architecture) on Clean Architecture, MVVM, and DI (Hilt/Dagger).
- Cut dropped frames in the content feed from ~40/sec to ~10/sec (75%) by minimizing recompositions.
- Wrote unit and UI tests for feed, chat, and payment flows, enforced in code review.
- Reached and maintained a 4.8 rating on Google Play.

Earlier Experience — SoftJet · IPartner / Binet 09/2020 – 04/2022

Tech: Kotlin, Java, XML, Custom Views, RecyclerView, Maps.me, Mapbox

- SoftJet — Middle Android Developer (07/2021 – 04/2022): built an e-learning app (1,000+ courses) with progress tracking and lesson streaming; led 2 Android developers; designed backend API specs including real-time chat.
- IPartner / Binet — Android Developer (09/2020 – 04/2021): built a business-intelligence app (financial metrics, real estate, company analytics), maintained 3 Java apps, integrated Maps.me/Mapbox, and doubled map-rendering performance.

INDEPENDENT PROJECTS

Gisti — AI Checklists — Independent KMP Developer · Side Project 01/2026 – Present

Tech: Kotlin Multiplatform (Android + Web/wasmJs), Compose Multiplatform, Koin, Room 3.0, Google Gemini via Firebase Cloud Functions, RevenueCat, Cloudflare Workers

App: play.google.com/store/apps/details?id=com.antonchuraev.aichecklists

Web: <https://gisti-ai.com/>

- Shipped a production AI product end-to-end — architecture to release on Google Play and Web — on a single KMP codebase (Compose wasmJs / Skiko canvas; Room over SQLite OPFS in a Web Worker).
- Integrated an LLM (Google Gemini) for AI chat and for converting Photo/PDF/Text/Link/Voice into checklists, with server-side inference via Firebase Cloud Functions (API keys in Secret Manager, never on-device).
- Built freemium monetization on RevenueCat (paywall, trial, daily credits) with limits via Remote Config; multi-module Clean Architecture (api/impl), MVI, Navigation 3, expect/actual; CI deploy to Cloudflare Workers; Playwright web e2e.

AI ENGINEERING

Custom Claude Code Multi-Agent System — Self-Built AI Developer Platform 2025 – Present

Tech: Claude Code, Anthropic Claude (Opus / Sonnet), MCP (Model Context Protocol), subagents, custom skills, hooks

Repo: github.com/AntonChuraev99/claude

- Engineered a personal multi-agent system on Claude Code — 15 domain-specialist subagents (Android, KMP, Kotlin, wasmJs, testing, design, web, docs) with task routing by complexity and impact, plus custom skills and MCP integrations (Amplitude, Firebase, Sentry, RevenueCat, GitLab/Cloudflare CI, browser automation).
- Built a self-improving agent loop (automated docs pipeline, code knowledge-graph retrieval, 130+ logged improvement experiments) and use it daily to ship production KMP apps — Swapify Web and Gisti — with automated testing, security, and architecture review.

EDUCATION

Bachelor's Degree in Business Informatics — Synergy University, 2021 – 2025

Focus on IT management, business processes, and digital systems.

LANGUAGES

English — Upper-Intermediate (B2) | Russian — Native
